From the current evaluation report Section 2.3, page 5

2.3 Stormwater

There are five general stormwater collection areas on the former Gasco site: the NW Natural LNG tank basin, the N W Natural LNG operations area, and portions of the properties occupied by Siltronic, Pacific Terminal Services, and Koppers. The last three areas listed each have separate NPDES permits regulating stormwater. Stormwater from the LNG tank basin is currently treated and discharged to the city sanitary sewer, but in the future will be treated and discharged under this permit. The stormwater originating in the LNG operations area (outside of the LNG tank basin) has previously been characterized and it has been determined that it is not contaminated with pollutants associated with the former gasification operations.

If Karen Burgess has no objections, I will ask Alex and Krista if that works for them.
